TO WHOM IT MAY CONCERN

Zbigniew JERZAK has been studying at Silesian University of Technology since 1998. He has never failed a single exam, nor had he any problems that would involve his course of studies.

My contact with Mr. Jerzak commenced on his second semester. I was his lecturer of the Computer Programming course, that lasted three semesters. Since during the last semester of that course Mr. Jerzak studied abroad – at the Nottingham Trent University – as a part of his final course project he had to independently develop a project under my remote supervision. The aim of the project was to develop a programming library (in C++) implementing an arbitrary precision floating-point data type and operations on it. The project required a sophisticated programming techniques and a thorough knowledge of the C++ language along with Standard Template Library (STL). Since the project was done by Mr. Jerzak whilst his stay in United Kingdom, he was forced to work on the project on his own, with limited possibility of consultation. The project presented by Mr Jerzak was done in intelligent and innovative way, with deep understanding of the underlying software techniques and outstanding programming skills. This situation has shown that Mr. Jerzak has the ability of independent, individual thinking and creative problem solving. Furthermore Mr Jerzak has proved his capability of fast and successful development in required field of study. Therefore I would recommend Mr. Jerzak as a hard working and self-confident student.

If you have any questions please contact me at jfrancik@zeus.polsl.gliwice.pl.

Yours sincerely,

Jarosław Francik
